PROFILE

Mid-level Full Stack Developer specializing in Artificial Intelligence and Cloud Computing (Azure). Extensive experience in optimized coding, the design and implementation of scalable architectures, and continuous improvement of web and desktop applications. Strong skills in frontend (HTML, React, Vite, .NET) and backend (C#, .Net Core, Python, Java) development. Proficient in working with SQL Server and Azure SQL databases. Distinguished by teamwork, organizational skills, complex problem-solving abilities, and a track record of delivering high-impact technological solutions.

EMPLOYMENT HISTORY

❖ **Web Application Development - Incident Management** Nov - Dic 2019

- Implemented a web solution to record and manage incidents for the Information Technology Unit (UTI), using a technology stack that included HTML, CSS, JavaScript, PHP, and MySQL.

❖ **Analytics Support, Big Data Solution Architect** May 2020 - May 2026

- Designed and developed operator dashboards for mining trucks, transforming operational data into actionable visualizations with Python, Flask, SQL Server, and Power BI.
- Built REST API integrations to collect, validate, and migrate business data from platforms such as Centinela, FastField, FirstPriority, Inmation, MineraAndinaSol, and VisionLink into SQL Server and Azure SQL.
- Automated data ingestion and transformation pipelines with Azure Data Factory, Azure Storage Accounts, Azure Databricks, and Parquet files, improving the availability of reliable data for analytics.
- Developed web applications and serverless solutions with .NET, Function Apps, Static Apps, and App Services to expose operational information and support business workflows.
- Implemented business process automations with Logic Apps and Power Automate, integrating APIs, notifications, approvals, and scheduled data operations.
- Created geospatial queries to convert UTM coordinates into latitude and longitude for interactive Power BI reports, using R and SQL Server.
- Provisioned and managed Azure environments, including Resource Groups, Virtual Machines, Storage Accounts, Managed Identities, and Key Vaults, using PowerShell, Azure REST APIs, and Azure DevOps.
- Developed intelligent web chatbot experiences with Microsoft Copilot and AI Foundry, integrating workflows, users, enterprise data, and secure access to backend services.

TECHNICAL SKILLS

Frontend			Backend		
HTML	React	Jinja2	Azure	Python	PHP
Bootstrap	Vite	PowerBI	SQL	.NET	R
